

THE CITY OF
SAN DIEGO

Sewer Group 738

Background

The City of San Diego has established an ongoing program that mandates the replacement of all aging and deteriorating existing sewer mains within the City. The project will upgrade the sewer system to meet current design standards and comply with EPA environmental requirements.

Project Overview

Sewer Group 738 consists of replacing approximately 5,405 feet or 1.02 miles of sewer mains, mainly located within the alleys indicated on the map shown. The replacement will use the open trench method of construction, with trenches typically being 3-5 feet wide dug with excavators and similar large construction equipment.

Appropriate traffic control measures will be implemented.

The project also includes installing curb ramps at intersection corners within the project limits, and resurfacing the streets upon completion of the project.

These sewer main replacements will eliminate future sewer main stoppages and sewer spills, while increasing service reliability to all in the community.

Construction Schedule

Construction is scheduled to begin in September 2011 and is estimated to complete in March of 2012.

Cost

The total project cost is approximately \$1.8 million.
